Fuel price distributions by fuel type.

Insights about fuel prices

Diesel | Rural | Brand | Brand | Fuel | Suburb | Spatial

"A $3 wall" how petrol and diesel parted ways?

Did the war and the excise changes move prices, and did petrol and diesel respond alike? We expected prices to rise sharply after the war began on 28 February 2026 (Council on Foreign Relations, 2026), fall after the excise cut on 1 April, and rise again when it was restored on 1 July and 3 August (ABC News, 2026), with petrol and diesel responding in the same way.

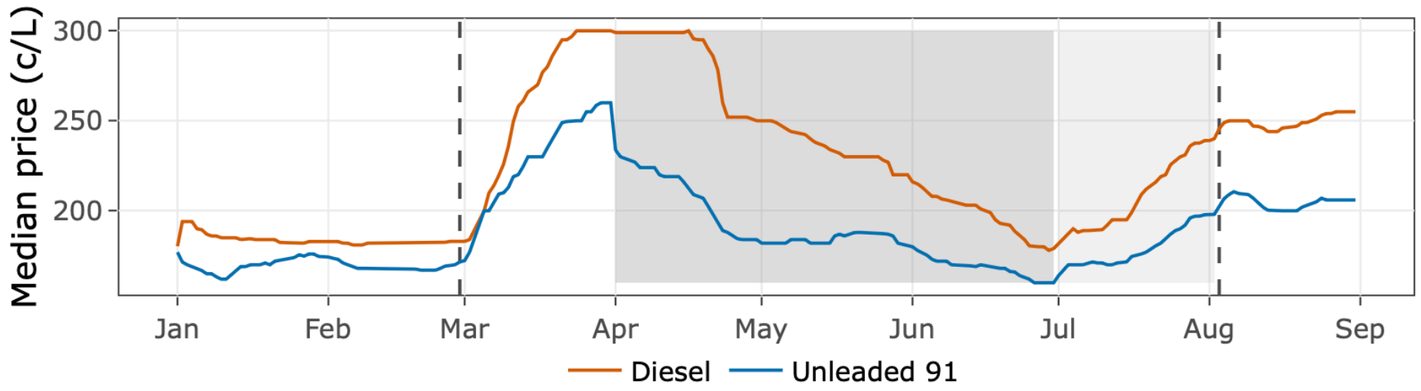

Figure 3: Daily median price of unleaded 91 and diesel across the team's stations in 2026. Dashed lines mark the start of the war (28 February) and the full restoration of the excise (3 August); the dark band shows the excise cut (1 April to 30 June) and the light band the half-restored excise (1 July to 2 August).

What happened in Jan-Feb in some Sydney stations?

Excited to see

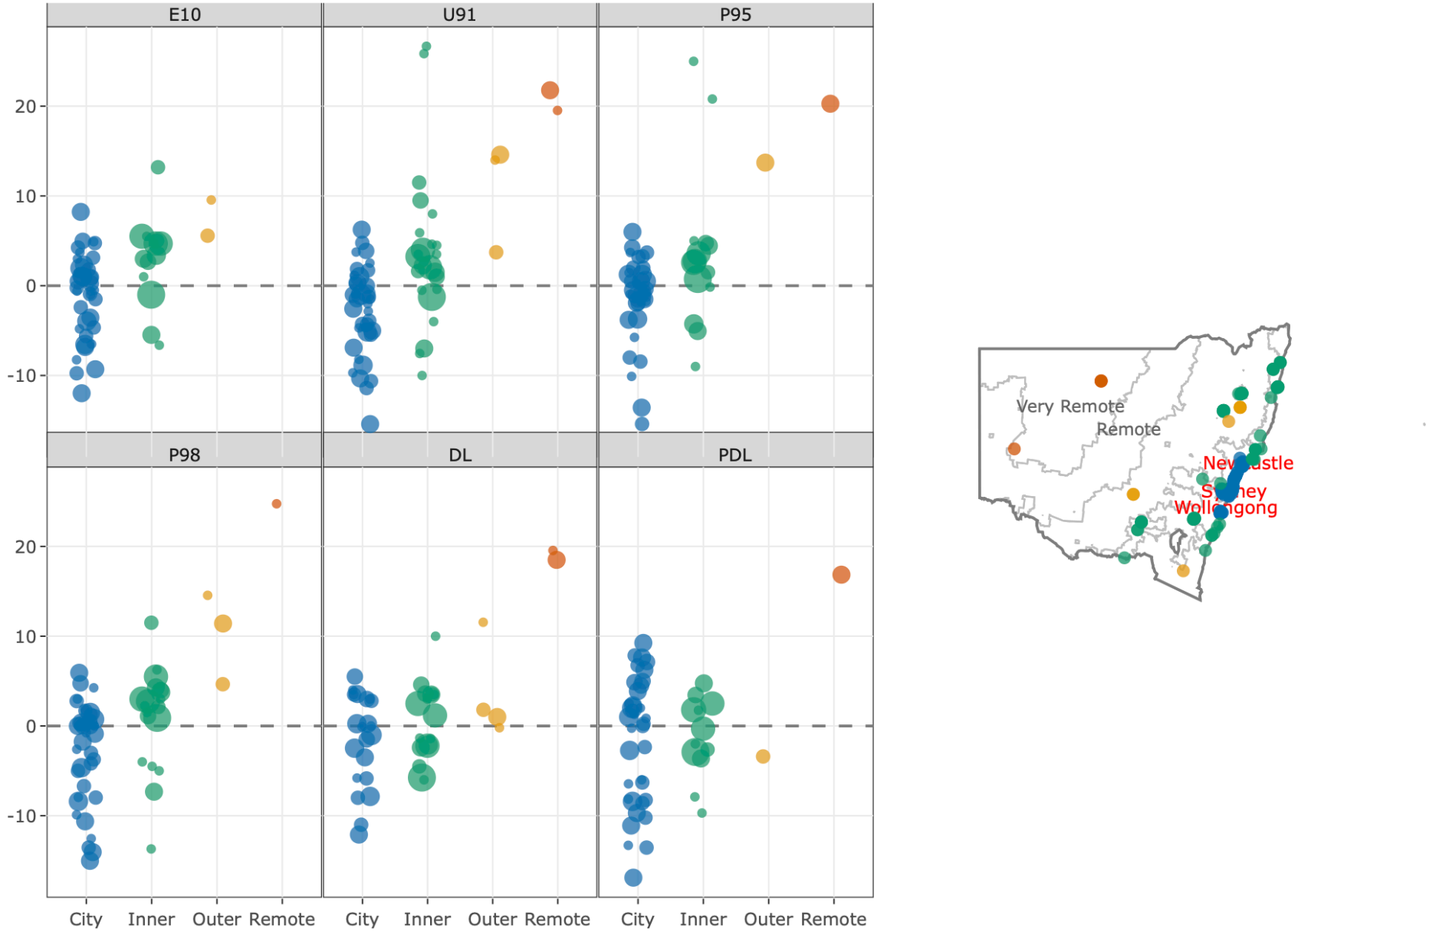

Figure 3: Left: typical price of each suburb for six fuels (each dot is a suburb). Right: every station within ABS remoteness-zone borders and major city areas shaded

Discussion about part 2

- What does temporal analysis or traffic mean?
- What is the traffic data?
- ???
